

Automatic Fish Scale Remover: MU Series

MU Series automatic fish-scale remover completely eliminates manual scaling work in process of fish. Operators' job is only to feed fish to conveyer of the machine and pick up scaled fish. The machine automatically and efficiently removes scales with high pressure jet water. Line speed and water pressure can be adjusted by very simple operation to make the optimum condition for processed fish. Rotating mesh belt screens removed scales from water so as to keep the circulated water clean.

Features:

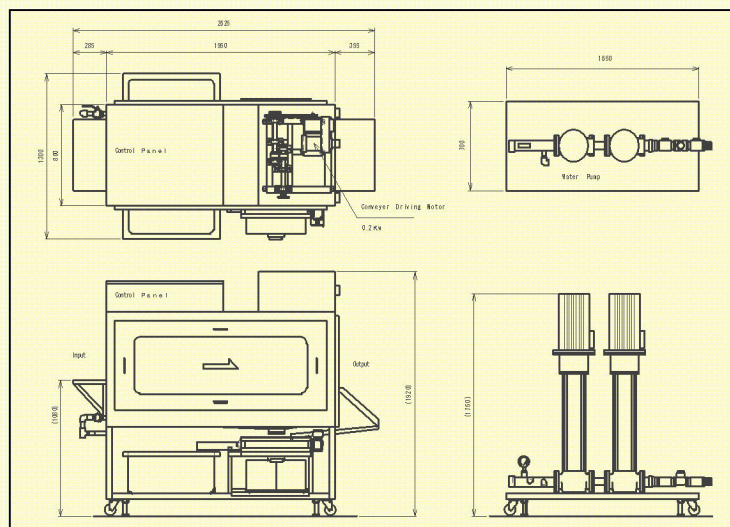

- ◆ Removes scales efficiently with a specially designed water-jet system.
- ◆ Delicately adjustable water-jet never spoils the quality of the processed fish.
- ◆ Centralized control panel provides simple operational control.
- ◆ Can process fresh, chilled or frozen fish.
- ◆ Water circulation system saves water consumption.
- ◆ Rotating mesh screen automatically strains out removed-scales from circulated water.

Brief Specifications:

- ◆ Acceptable size and weight of fish:
10cm to 100cm long, 3cm to 35cm wide
and at most around 12Kg heavy.
- ◆ Processing speed (adjustable from
125m to 580m/hour): e.g.
Salmon/Sea Bass: 450 to 550m/h
Bream/Snapper: 550 to 580m/h
Flounder/ rock fish: 400 to 550m/h
(Processing speed divided by fish length is the
the number of fish to process per hour.)
- ◆ Main Material of the machine:
Stainless steel 304

Models / Power Consumption

- ◆ MU1-22C: 22.8 KW (3-Phase AC)
